

# Personal Technology for Safety and Convenience

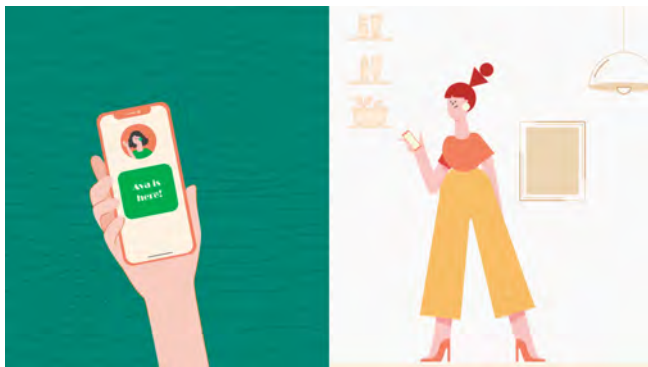

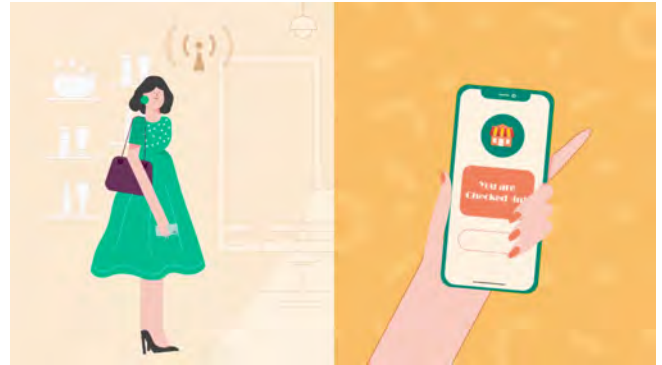

Now more than ever, your customers and employees need safety assurances. Zenoti ensures you deliver by seamlessly weaving customer and employee interactions with your salon or spa through the tool they trust most: personal mobile devices.

**Realize elevated experiences for your customers and employees with personal technology.**

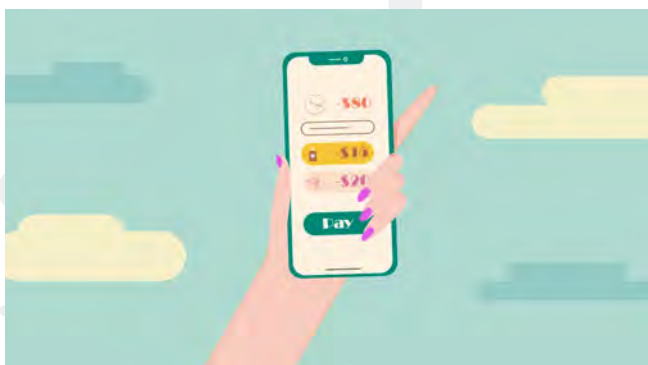

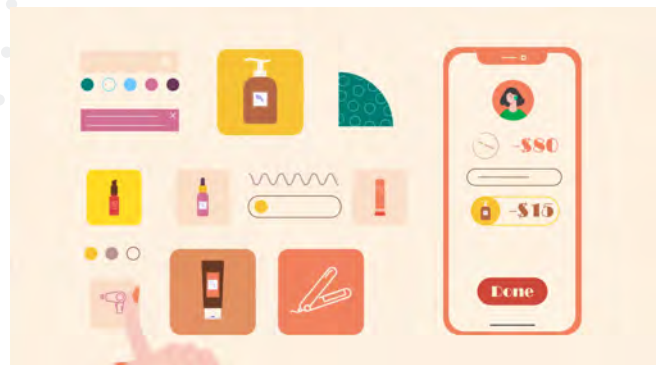

Your guests complete their digital intake form at home, before their appointment. With digital forms, you reduce unnecessary touch and save time during check-in.

By walking through your doors, your guests check-in automatically from their mobile phones. You ease their anxiety by allowing for social distancing. There's no need for your guests to touch any surfaces or closely interact with employees.

Service providers receive immediate notifications of your guests' arrivals. By allowing employees to use their mobile devices, you reduce guest wait times and crowded waiting areas.

Service providers revise guest invoices to include add-on services or products directly from their mobile devices. You deliver impressive convenience while saving time and avoiding unnecessary interactions at check-out for your guests and employees.

Your guests can pay and tip their providers from their trusted mobile devices, while service providers receive instant payment notification confirmation. Once again, you reduce unnecessary waiting and face-to-face interactions at check-out.

After service, your guest receives a notification to rate and rebook their service from the convenience of their mobile devices. By contacting guests at the moment they will most likely respond and rebook, you increase opportunities for great reviews and returning customers.
